

Express Diagnostics

Get Clarity on ISO 19650. In one week, know what to fix and how.

BOOK NOW

Express Diagnostics is a fast, fixed-price service for organisations starting with BIM. You get a precise map of gaps, a readiness roadmap, and an executive-ready summary you can act on immediately.

Many organisations know they need to “start with BIM” or “prepare for ISO 19650,” but don’t know what that means in day-to-day work.

They face recurring frustrations: missing information, last-minute corrections, unclear responsibilities, uncontrolled versions, poor handovers, or operational teams left without usable asset data.

Express diagnostics gives a clear, structured starting point.

No long projects. No complex terminology. Just clarity on what to do next.

A Short Explanation What is ISO 19650?

ISO 19650 is the global standard for managing information in construction and asset management. It helps to:

- Avoid errors caused by outdated or missing files
- Reduce time wasted searching for information
- Communicate expectations clearly to designers and contractors
- Deliver consistent project documentation
- Receive usable handover information for operation and maintenance

Express diagnostics evaluates readiness across delivery and operation following ISO 19650 Parts 1, 2, and 3.

What Express Diagnostics Includes?

ISO 19650 Gap Map

We identify what is missing or unclear in your current way of working across:

- Responsibilities and Approvals
Defining what information you need (early, not late)
- Coordination and controlled sharing of information
- Handover information and operational usability
- The gap between construction and operation: where data is typically lost during manual commissioning and late consolidation

Capability and Maturity Snapshot

A simple, visual overview of:

- What works today
- What does not work consistently
- What must be improved first

You receive a maturity profile on a 0–4 scale and a clear narrative of what the score means in practice.

Clients Choose Express Diagnostics for:

- Fewer avoidable errors through clearer responsibilities and approvals
- More predictable delivery through early definition of expectations
- Reduced risk of using outdated information through basic control rules
- Cleaner handovers and less rework after completion (where applicable)
Smarter investments in skills and systems, based on evidence, not assumptions

Readiness Roadmap (0-6 Months)

A practical roadmap describing:

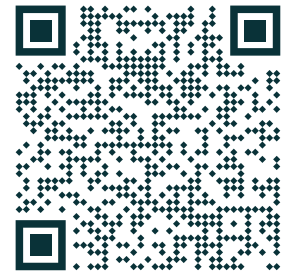

- Quick wins to reduce mistakes and confusion
- Essential minimum documents / rules to introduce
- Roles that must be defined
- Training priorities
- First steps toward predictable BIM-enabled delivery
- How to make handovers usable for operations

Executive Summary

A two-page summary for management:

- Key findings
- Risks
- Priorities
- Value proposition (what improves and where cost / risk reduces)
- Recommended next steps
